76 9th Ave
New York, NY 10011

To Whom It May Concern,

I am writing to apply as a software engineer at Google at the New York location. Building software at Google has been a dream of mine for a long time, and I believe that because of my experience and what I know about the company I would be a perfect fit for the role.

I've loved the process of creating software ever since I started making simple adventure and puzzle games in middle school. It was a way to tell stories and let people experience a world that had never been seen before. I distinctly remember one Summer building an entire game world out of cardboard, photographing it, and filling it with digital puzzles that revealed the story of a traveler trapped on an alien planet. Making games became and outlet for me, and I've been passionate about the software development process ever since.

In my freshman year of college, I was hired as a part-time web developer at Eduware Inc. I had some programming experience at the time, but knew nothing about web development. But I took the opportunity to learn how to use databases, program web applications, use version control and work on a large-scale project. After working there for two years, I started an internship at Applied Visions, where I worked on visualizing large data sets. I learned about networks, manipulating data and visualization theory and tools. More importantly though, I became involved in a highly professional work environment (the company contracts for the government and holds frequent design meetings for each project).

Outside of programming, I love music. I've been playing piano since I was 6, and for the past few years I've been composing piano and electronic pieces. Through this I developed a passion for sound design and mixing. In 2015 I produced and mixed an album, "Growth", that was composed by my friend and was released on Codex Rag Records. Lately I've been mixing songs for another friend that will likely turn into an album. Other hobbies of mine are photography and filming. I've co-directed and co-edited several music videos for the band Approaching Troy, and I co-directed a short film "Binge" that played in two film festivals in Denver.

I'm currently working on several projects. For my senior thesis I'm developing an interface that allows users to design unique soundscapes by drawing in a virtual 2D space. I plan to extend this to an app where users can share and collaborate on sound designs. I'm also working with a friend on a digital tactical board game that teaches players about Bitcoin.

My resume is attached, and I look forward to hearing back from you. My email is alexscarlatos@aol.com and my phone number is (631)223-6290.

Sincerely,
Alex Scarlatos
